KNOW ORGANIC FOOD & PROCESS

Organic farming is a production system that avoids or largely excludes the use of synthetically produced agricultural inputs like fertilizers, pesticides, growth regulators, livestock feed additives etc.

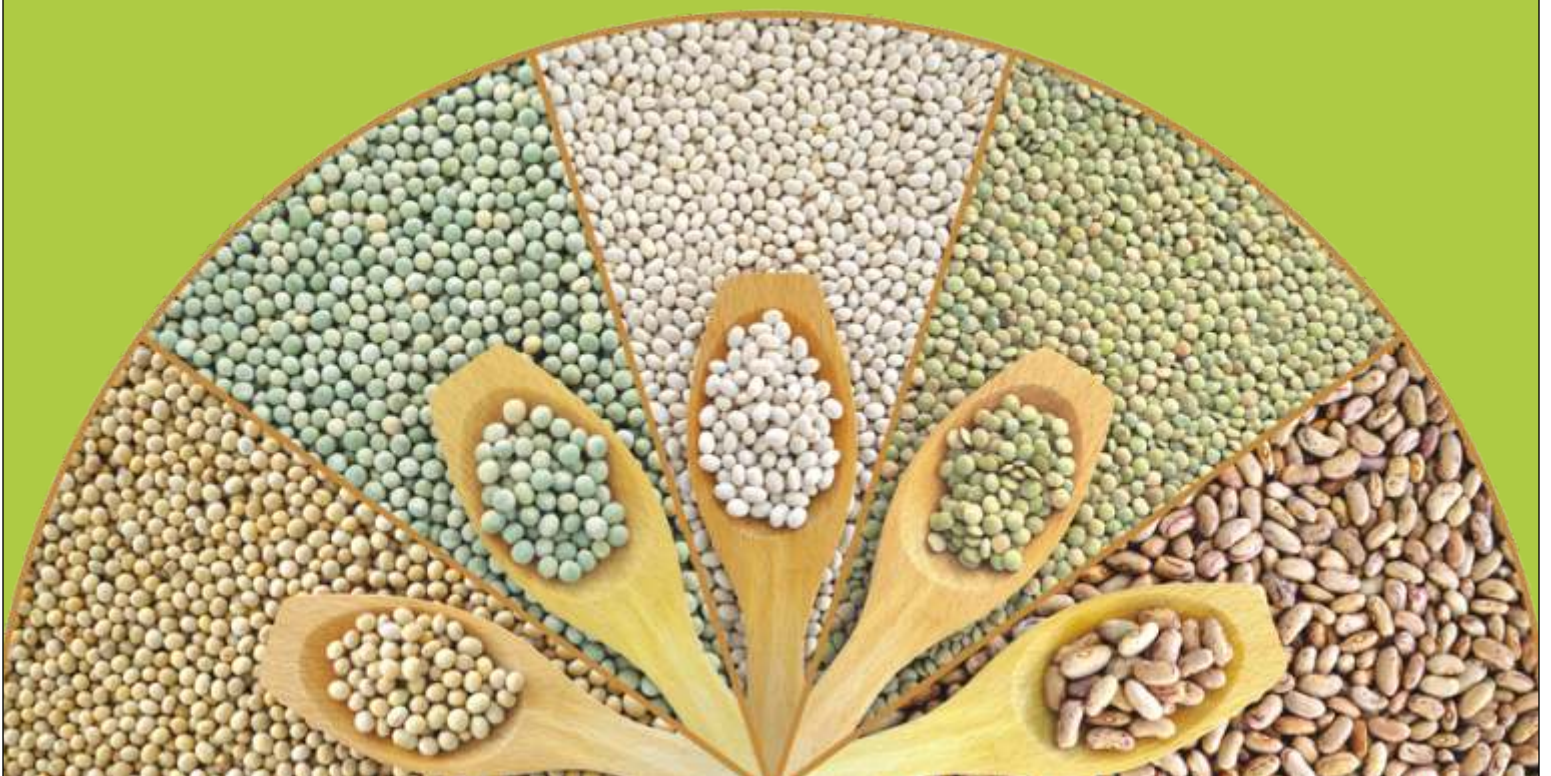

Toxic chemicals, fertilizers, pesticides and other artificial treatment used in the cultivation of modern crops have been proven to be harmful to the human body in the long term. Organic foods are grown without the use of such harmful chemicals and are safer for consumption.

Shanti Organic was founded for creating an effective and efficient bridge between Indian marginal farmers and buyers across the world seeking high-quality organic produce.

Our company works with a network of certified organic farmers and farms to deliver fresh and seasonal produce. Shanti Organic Agriculture Farms are based on organic philosophy and practice organic farming for the promotion and development of organic food. Our farming process is based on cow based natural farming. We use Jivamruta, cow-dung, Gaumutra and so many other natural medicines for farming process. Our farmers do agnihotra yagna to clean atmosphere of their farm everyday at the time of sunrise and sunset.

The entire product development process, right from growing to processing to labeling is certified by internationally accredited certifying agencies USDA, INDIA ORGANIC & RSOCA. We are also registered with APEDA (Agricultural and Processed Food Products Export Development Authority) Government of India, supplier of Organic Food Products.

Special impetus is placed on ensuring Purity, Quality, Product Packaging and Labeling is of the highest international standards. Our Central Warehousing, Processing and Packaging Unit are ISO Certified Unit.
